

ABSTRACT

The invention concerns a container, such as a residential container, for instance, with built-in windows, doors, etc., which can be equipped with shutter frames and shutters, in which the connection of the container wall opening to the window frame is
5 effected by means of an interposed, wraparound installation frame, which is connected mechanically to the window frame or shutter frame, on the one hand, and to the edge of the container wall opening, on the other hand.
